Instructions

You should create your own library - like bootstrap (https://getbootstrap.com), but much simpler

give your library a name

you library should have primary color

//you library should have these elements:

buttons (at leask 3 different, make sure they have hover effects)

cards (at least 2 different)

pagination element

navigation bars (at least two different))

modal (just a card, it should both open and close)

progress bars (at least 2 different)

spinners (at least 3 different)

scroll spy

//you library sould have these utility classes for two screens (small and large for example):

flex classes (all flex classes so it would be possible to create flex layouts)

colors for background

borders

display

opacity

shadow

padding

margin

// check what scroll spy is and include it in to your library page

// add some responsiveness to your page

//every different element or utility should have description, how to import it or what class to write to use it

// be creative

// have fun
